Jenkins Instance Running On Openshift

2019

Jenkins Running On OpenShift (JIRO)

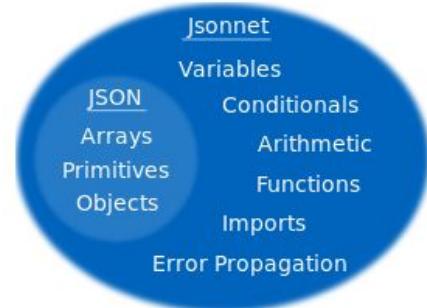

- Maßgeschneiderte Lösung um eine große Anzahl von Jenkins Master Instanzen zu verwalten
- Basiert auf
 - Docker
 - Jenkins OSS
 - Jenkins Configuration as Code (JCasC) Plugin
 - Templates
 - Shell scripts
- Läuft auf OpenShift
- “Configuration as code”-Paradigma
- <https://github.com/eclipse-cbi/jiro>

Jenkins Running On OpenShift (JIRO)

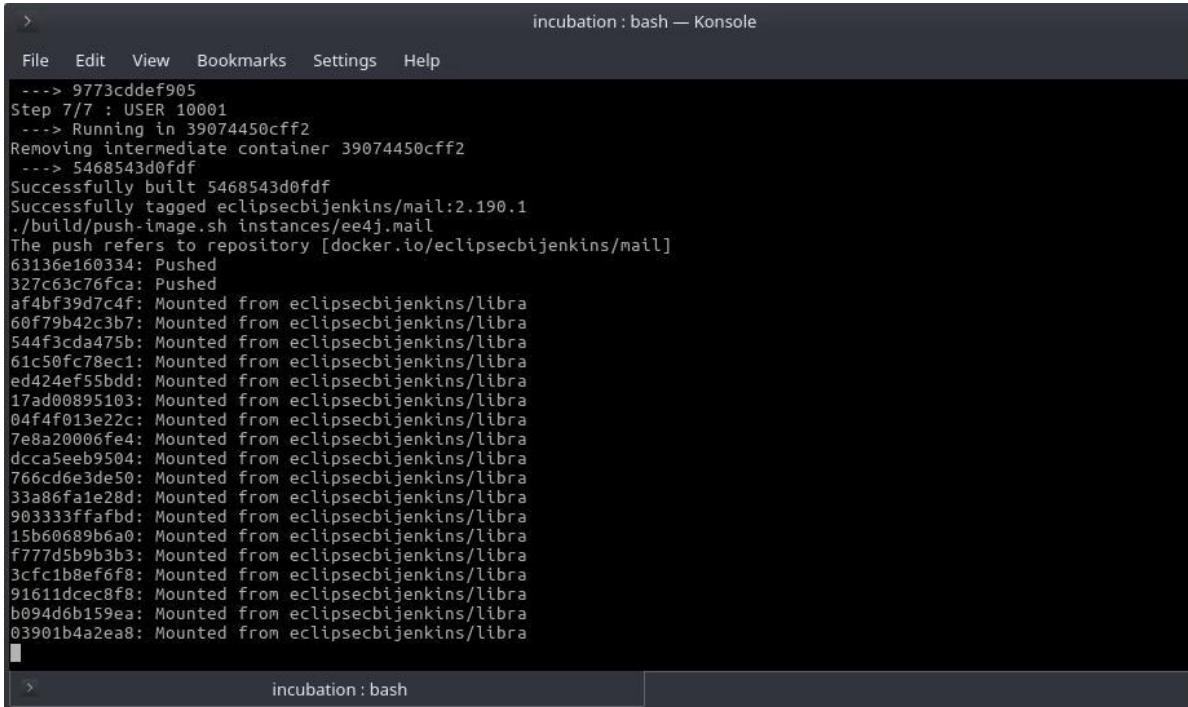

- > Minimale Konfiguration
- > Hohe Flexibilität
- > Templating
 - Jsonnet
- > Neue JIRO-Instanz
 - Provisionierung dauert ca. 3 Minuten
 - reine Provisionierung ist schneller
 - fast kein manueller Input

```
config.jsonnet
1 { project+: {
2   fullName: "eclipse.jdt",
3   shortName: "jdt",
4   displayName: "Eclipse Java Development Tools (JDT)"
5 }
6 }
7 }
8 }
```

Jenkins Running On OpenShift (JIRO)

> Demo

The screenshot shows a terminal window titled "incubation : bash — Konsole". The window displays a log of Jenkins build steps for a mail image. The log includes messages about building, tagging, pushing, and mounting Docker images. Key lines from the log include:

```
--> 9773cddef905
Step 7/7 : USER 10001
--> Running in 39074450cff2
Removing intermediate container 39074450cff2
--> 5468543d0fdf
Successfully built 5468543d0fdf
Successfully tagged eclipsebjenkins/mail:2.190.1
./build/push-image.sh instances/ee4j.mail
The push refers to repository [docker.io/eclipsebjenkins/mail]
63136e160334: Pushed
327c63c76fca: Pushed
af4bf39d7c4f: Mounted from eclipsebjenkins/libra
60f79b42c3b7: Mounted from eclipsebjenkins/libra
544f3cda475b: Mounted from eclipsebjenkins/libra

```

Jenkins Running On OpenShift (JIRO)

> Demo

The screenshot shows the Jenkins web interface. At the top, there is a navigation bar with the Jenkins logo, the text "Jakarta Mail", a red notification badge with the number "2", a search bar, and user information for "Frederic Gurr" with a "log out" link. Below the navigation bar is a sidebar on the left containing links: "New Item", "People", "Build History", "Manage Jenkins", "Query and Trigger Gerrit Patches", "My Views", "Job Config History", "Lockable Resources", "Credentials", and "New View". The main content area features a large "Welcome to Jenkins!" message and a call-to-action "Please [create new jobs](#) to get started.". Below this, there are two collapsed sections: "Build Queue" (which says "No builds in the queue.") and "Build Executor Status". In the bottom right corner of the main content area, it says "Jenkins ver. 2.190.1".

Quotas und Resource Packs

- > “Tragedy of the commons”
- > Resource Requests und Limits
- > Jedes Eclipse Projekt erhält ein Resource Pack:
 - 2 vCPU, 8 GB RAM
 - Max. zwei parallele Builds
- > Eclipse Mitglieder können zusätzliche Resource Packs zuweisen
- > Externe Buildserver (Build agents)

```
resources.yml
1 apiVersion: v1
2 kind: Pod
3 spec:
4   containers:
5     - name: maven
6       image: maven:alpine
7       command:
8         - cat
9       tty: true
10      resources:
11        limits:
12          memory: "2Gi"
13          cpu: "1"
14        requests:
15          memory: "2Gi"
16          cpu: "1"
17
```

Status Quo

- > ~250 Jenkins Master Instanzen
- > Migration der CI Instanzen auf Cluster-basierte Infrastruktur
- > ~40 Instanzen auf CJE
- > ~100 Instanzen auf der alten Infrastruktur
- > Migration soll in Q1 2020 abgeschlossen werden

Migration

- > Technische Migrationen
- > Organisatorische Migration
- > “Geistige” Migration

Migration - Herausforderungen

- > Keine Builds mehr auf Jenkins Master
- > Build-Umgebung basierend auf Docker Images
 - Vergängliche Buildumgebung
 - Freestyle Builds vs. Docker Images
 - Default pod/container templates
 - Maßgeschneiderte eigene Docker Images
 - Dürfen nicht als Root laufen in OpenShift
 - Docker Images können nicht gebaut werden
 - Setzen Jenkins Pipelines voraus
 - VolumeMounts
- > Wiki: <https://wiki.eclipse.org/Jenkins#FAQ>

Jenkins Pipelines

- > Configuration as Code

- > Jenkinsfile

- > Vorteile

- Historie
- ermöglicht komplexe Buildprozesse

- > Nachteile

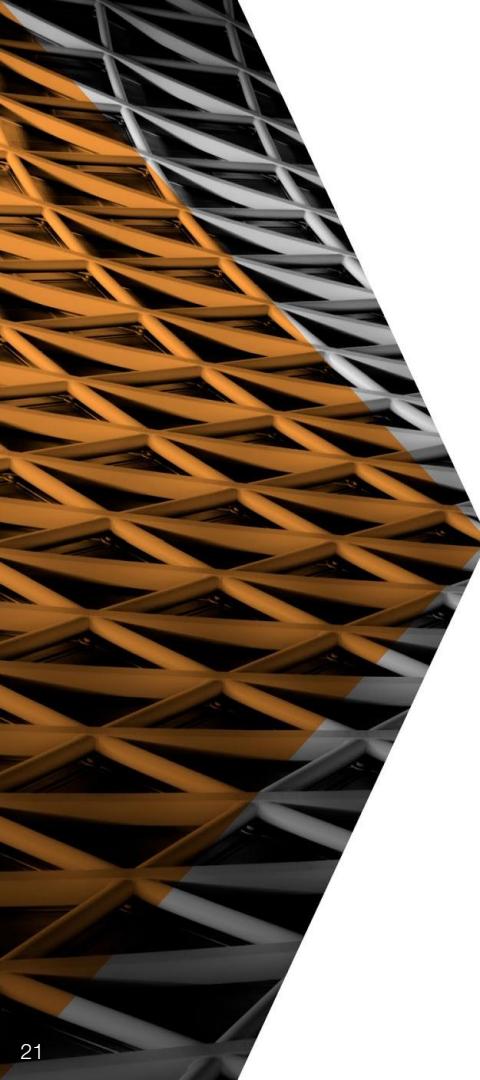

- Komplexität

- > keine separate Konfiguration in der UI

Jenkinsfile

```
1 pipeline {  
2   agent any  
3   options {  
4     buildDiscarder(logRotator(numToKeepStr:'10'))  
5   }  
6   tools {  
7     jdk 'oracle-jdk8-latest'  
8   }  
9   stages {  
10    stage('Checkout') {  
11      steps {  
12        cleanWs()  
13        git(url: 'https://github.com/eclipse/hipp2jipp', changelog: true)  
14      }  
15    }  
16    stage('Build') {  
17      steps {  
18        withMaven(maven: 'apache-maven-latest') {  
19          sh 'mvn clean verify'  
20        }  
21      }  
22    }  
23    stage('Archive') {  
24      steps {  
25        archiveArtifacts 'target/*.jar'  
26        junit '**/target/surefire-reports/TEST-*.xml'  
27      }  
28    }  
29  }  
30 }  
31 }
```

Zukunft

- > Monitoring
- > Performance
- > Jenkins Bugs reporten/fixen
- > Noch mehr Automatisierung
- > Getrennte Namespaces für Master und Agents

Q&A

Zusammenfassung

Problem

Viele Jenkins Instanzen
administrieren

Ansatz

- Kubernetes
- Configuration as Code
- DIY

Lösung?

- Gute Basis
- Ausbaufähig
